

Boost your offering with connected gates

Monitor all your gates, barriers, bollards and doors via one single system

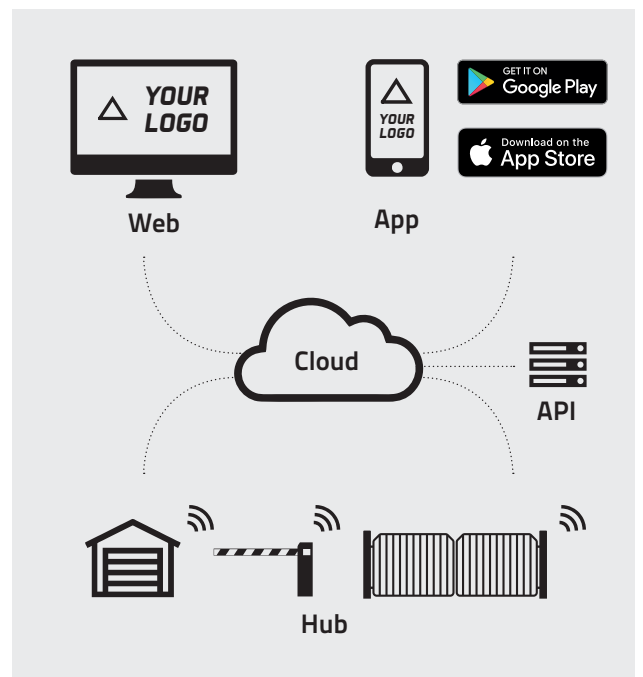

Increase your competitive edge with Comlink. Don't just sell security gates, sell connected gates complete with your very own mobile app, offering extras like real-time remote monitoring and forecast-based servicing, and much more.

Comlink is an all-in-one IoT solution, developed specifically for industrial applications. Update your portfolio simply and securely, without the need for costly investments.

The entire system, including all of the built-in services, can be branded and used as your own. Your brand name will be on the app, website and hardware. Flexible and adaptable to meet your specific needs.

Popular features like GSM control, annual timer and events logging are all standard features, helping you offer your clients a truly customised solution.

Connecting new gates to the system is simple and straightforward, as Comlink is compatible with most gates, doors and control systems on the market.
